

Available third-party software update catalogs

Article • 04/18/2024

Applies to: Configuration Manager (current branch)

The **Third-Party Software Update Catalogs** node in the Configuration Manager console allows you to subscribe to third-party catalogs, publish their updates to your software update point (SUP), and then deploy them to clients. You can [add custom catalogs](#) from third-party vendors.

Third-party update catalogs available for import

To make it easier to find custom catalogs, we're providing a list of links as a convenience. Some catalogs are freely available and some catalogs have an additional cost associated with them. This list includes catalogs that may only work with [System Center Updates Publisher](#) and not the **Third-Party Software Update Catalogs** node in the Configuration Manager console. Check with the catalog provider for details including pricing, support, and if the catalog supports in-console third-party updates.
